

At last I've got the car on the ramp and the box/converter are out, freshened and ready to go back in. The only thing that needed changing was the band as it had a bit of burning in the centre. The reason for that is the drum is worn slightly so I'll order a new CNC billet high gear drum from Racetuf, Australia for the next build at the end of this season. I was pleased to see that there was no major damage in there though. Must have been a good trans builder.....

Richard Perry of Peach TV came to do a profile on me for the 0-60 challenge. It's going to be an hour long programme on Granada Men and Motors channel in a documentary style featuring amongst others me, John Sleath and Sue Jackson so look out for it soon.

A bit of a milestone for the site as well this weekend as the 20,000 hits has clocked round. Thanx to all the people who have visited us since June 2001. Oh and don't forget, Let's see lots of your views and tech questions on the message board.

Tara a bit.....
